

HMF 2420-K

- power to lift.

HMF Knuckle Boom Loader 2420-K

The HMF 2420-K Series

- The HMF 2420-K Series has been developed and tested to reduce the need for maintenance and service thanks to hard wearing and reliable solutions.
- All hoses and pipes are placed internally and are well protected. This protects the hoses and pipes, and gives a perfect interaction between functionality of the loader and ease of maintenance.
- The RCL 5300 is monitoring the conditions of both the loader and the Fly-Jib in relation to load moment, operation and function, this gives the operator a constant, full view of the working situation.
- Models equipped with Fly-Jib and hydraulic winch can be folded in the stowing position with the wire fitted, this supersedes the previous necessity to strip the wire before folding the loader.
- The HMF InfoCentre (Pat. Pending/option) monitors the loader operation and indicates the load moment of both the loader and the Fly-Jib, thus allowing the loader to be operated in the best possible position to solve the lifting task.
- A range of optional extras are available, e.g. hydraulic winch, hydraulic extra valves routed to the end of the Fly-Jib extensions, this allows operation of hydraulic accessories and manual extensions with safety equipment.
