

AUTOTELAIO

TELAIO: Tipo «box» struttura scatolata in lamiera d'acciaio ad alto limite elastico. Fanno parte integrante di esso anche le casse porta-stabilizzatori.

CABINA: panoramica, interamente metallica, insonorizzata, su sospensioni antivibranti, dotata di riscaldamento oltre ai normali accessori.

STRUMENTAZIONE: contagiri, tachimetro, contaore,termometri olio e acqua, indicatore di livello carburante, spie bassa pressione freni, carica alternatore, riserva carburante, indicatori di direzione, luci abbaglianti, blocco differenziali.

TRASMISSIONE: comprende gruppi di notevole qualità che conferiscono alla macchina le caratteristiche specifiche per il movimento fuori-strada.

MOTORE: Mercedes OM 366 a 6 cilindri in linea da 212 CV a 2600 g/min., coppia max. 65 kgm a 1600 g/min. Serbatoio carburante capacità 200 lt.

CONVERTITORE DI COPPIA: fissato al motore, aziona, tramite prese di forza, le pompe dell'impianto idraulico. Cambio Power Shift a sei marce avanti e tre retromarce. L'innesto della trazione anteriore è automatico quando si passa dalle marce veloci a quelle ridotte. Raffreddamento olio motore tramite scambiatore di calore.

FRENI: di servizio ad aria su tutte le ruote, secondo le norme C.E.E. Freno di stazionamento meccanico ad espansione, azionato a molle con comando manuale e a sbloccaggio pneumatico.

STERZO: a due circuiti indipendenti con idroguida servoassistita da due cilindri su entrambi gli assi. Sterzatura solo anteriore su strada, in concorde o a granchio, in cantiere. Pompa idraulica di emergenza azionata dalla trasmissione.

PONTI ANTERIORI E POSTERIORI: motori sterzanti con riduttore epicicloidale nelle ruote.

RUOTE ANTERIORI E POSTERIORI: semplici 16.00 R 25 XVC**.

SOSPENSIONI: idropneumatiche su ambedue gli assi. Possibilità di blocco dalla cabina su carro e su torretta.

IMPIANTO ELETTRICO: 24 Volt, alternatore 650 W, due batterie da 143 Ah.

IMPIANTO IDRAULICO: alimentato da tre pompe ad ingranaggi. Distributori idraulici pilotati da servocomandi posti in cabina. I componenti idraulici principali sono situati in posizione accessibile per manutenzione ed ispezione. Motore con pistoni radiali per la rotazione della torretta. Motore con pistoni assiali a due velocità per l'azionamento dell'argano principale e ad una velocità per l'argano secondario. Martinetti a doppio effetto per il sollevamento e lo sfilamento del braccio telescopico. Stabilizzatori idraulici tutti indipendenti comandati dalla cabina in torretta. Serbatoio olio capacità 300 lt., costruito interamente in acciaio con flangiflutti incorporati. Indicatore di livello esterno e sfiato. Filtri olio a piena portata sulle tubazioni di ritorno, cartucce da 30 micron, sostituibili.

PRESTAZIONI: velocità max. 70 km/h, pendenza max. superabile 70%, sforzo di trazione max. 14.000 kg., raggio di sterzatura 10,8 m. (solo asse anteriore), 8,5 (con i due assi).

SOVRASTRUTTURA

BRACCIO: a 3 sezioni con sfilo proporzionale in acciaio ad alto limite elastico. Lo sfilamento è comandato da un martinetto idraulico a doppio effetto. La seconda e la terza sezione vengono sfilate proporzionalmente. Quarta sezione meccanica (a richiesta) con sfilamento idraulico e blocco meccanico. Inclinazione braccio da -1° a +80° anche con il massimo carico, mediante un martinetto a doppio effetto. Valvole antiritorno su tutti i martinetti idraulici.

TORRETTA: in acciaio di qualità piegato a freddo con membrature interne di irrigidimento delle fiancate.

CABINA SOVRASTRUTTURA: panoramica e insonorizzata su sospensioni antivibranti, cristalli di sicurezza su tutti i lati e sul tetto. Servocomandi idraulici a due manipolatori con quattro funzioni ciascuno che migliorano la precisione e la sensibilità delle manovre. Strumentazione: manometri pressione servocomandi e olio motore, indicatore livello carburante, termometro acqua e olio convertitore. Interruttori per comando sterzo posteriore, bloccaggio sospensioni, interruttori comando stabilizzatori, innesto pompe, 2ª velocità argano, luci di emergenza, avvisatore acustico, freno di stazionamento, leva marce per lo spostamento in cantiere (possibilità di inserire n. 3 marce avanti ed 1 in retromarcia). Spie luminose varie.

ARGANO: a due velocità azionato da motore idraulico a pistoni assiali con riduttore planetario incorporato nel tamburo, discesa controllata e freno automatico autoregistrante. Velocità fune 63 m./min. 117 m./min. in 2ª velocità con tiro 4.000 kg al 4° strato.

ARGANO SECONDARIO: (a richiesta) azionato da un motore idraulico a pistoni assiali con riduttore planetario, discesa controllata e freno automatico autoregistrante. Velocità fune 90 m./min. con tiro di 2.500 kg al 5° strato.

ROTAZIONE: 360° su ralla di grande diametro da 0 a 1,5 g./min. con motore idraulico radiale e riduttore planetario a doppio stadio, freno progressivo automatico, doppia valvola di blocco e controllo; bloccaggio meccanico manuale per circolazione su strada.

Il costante miglioramento e i progressi tecnici, rendono necessaria la riserva del diritto di eseguire variazioni, nelle specifiche e negli equipaggiamenti, senza preavviso.
