Dimensions and Specifications

OPERATING DATA

3330E 3 AND 4-SECTION BOOM WITH 8' (2.4 m) JIB

8.5 ton (7.7 metric ton) main block, 100 lb (45.4 kg). 4.1 ton (3.6 metric ton) ball and hook, 50 lb (22.7 kg). 8' jib (stowed on main boom) 130 lb (59 kg).

3330ELB 3 AND 4-SECTION BOOM WITH 10' (3.0 m) JIB

8.5 ton (7.7 metric ton) main block, 100 lb (45.4 kg). 4.1 ton (3.6 metric ton) ball and hook, 50 lb (22.7 kg). 10' jib (stowed on main boom) 160 lb (73 kg).

- The rated loads are the maximum lifting capacities as determined by operating radius only. Any combination of boom lengths and angles may be used to obtain operating radius. The operating radius is the horizontal distance from a projection of the axis of rotation to the supporting surface, before loading, to the center of the vertical hoist line or tackle with load applied.
- The rated loads shown on full extended outriggers do not exceed 85% of actual tipping. The rated loads shown on rubber do not exceed 75% of actual tipping. These ratings are based on freely suspended loads with the machine leveled, standing on a firm, uniform supporting surface. Practical working loads depend on supporting surface operating radius, and other factors affecting stability. Hazardous surroundings, experience of personnel and proper handling must all be taken into account by the operator.
- Rated loads shown in the shaded areas are based on structural strength and/or strength of material and not on the stability of the machine.
- The weights of all load handling devices such as hooks, hook blocks, slings, etc., except the hoist rope, shall be considered as part of the load.
- Ratings on outriggers with all outriggers fully extended and fully down. If any of the outriggers are down but not fully extended, then the rating shown with outriggers retracted and

down shall apply.

- Ratings on rubber depend on tire capacity, condition of tires, and proper inflation pressure. Loads on rubber may be transported at maximum speed of 2.5 mph (4 km/h) on a smooth, hard, level surface, with boom retracted to shortest length possible and centered over front. Pick and carry is not allowed with loads on jib.
- For operating radius not shown, use load ratings of the next larger radius.
- The maximum combined total boom and deck load is 12,000 lb (5440 kg). For deck loads only, the maximum load is 14,000 lb (6350 kg) with 10 x 15 tires.
- Cable capacity with 7/16" (11 mm) diameter 6 x 19 EIPS-IWRC is 5,000 lb (2268 kg) per part of line.
- No external side load is to be induced on boom.
- Operation of this equipment in excess of rating charts and disregard of instructions is dangerous and voids warranty.
- Operate jib on outriggers only.
- Operate personnel platform on outriggers only.
- With boom attachments such as jib or work platform, boom must be fully retracted and forward unless on outriggers.
