

CONSTRUCTION AND MINING EQUIPMENT

Portable Derricks

stiffleg and guy line types
capacities to 35 tons

Timberland Portable Derricks are designed for simple assembly and disassembly. The modular components can easily be converted into stiffleg or guy line derricks and Chicago boom. (Extra components may be required.)

STRUCTURE: The structural components are fabricated from light, high tensile steel square tubing. Mast and boom as well as leg and sill straight sections are interchangeable and are made in standard 8' 4" lengths, pin hole to pin hole. All sections are connected together with quick release pins. The mast rotates on two self aligning bearings mounted on a common steel housing.

SWINGER: Derrick swinger is available with electric or electro-hydraulic power pack. A manually operated swinger is available for the 12 and 17 ton derricks only.

MAST BASE: Unique design allows the positioning of the base mounted sheaves to face the incoming hoist lines at almost any horizontal angle.

SHEAVES: All sheaves rotate on antifriction roller bearings.

Approximate Weight (lbs.) Straight Sections

Derrick Model	Mast and Boom Sections	Leg and Sill Sections
SD12 GD12	320	250
SD17 GD17	335	290
SD25 GD25	480	380
SD35 GD35	600	500
